

Installation instruction for Carplay Android Auto interface

LEXUS RX400 LEX4/LEX5

The interface is connected via a connection plug on the radio and a video cable on the display. It is estimated to take 30-45 minutes of work to connect the interface. No programming required.

Step 1. Remove the gear lever cover plate (unclip)

Lift and loosen the cover panel and unscrew the gear lever.

Step 2. Remove the panel underneath the radio (unclip)

Pull the panel underneath the radio forward and out.

Step 3. Remove the radio (screws)

The radio is fastened on both sides with 4x 10 mm bolts (2 left and 2 right). Be careful not to let the bolts fall down (the use of a magnetic socket wrench is recommended).

Step 4. Remove the display (screws)

The screen is secured with 2x 10 mm bolts.

Step 5. Connect the plugs and the microphone to the interface

Make sure that the video cable does not kink at the connection point on the interface.

Step 6. Test the system

Plug in the interface. Choose CD to switch from the radio to the Vline.

Remove and forget the existing bluetooth connection to the car.

Connect the phone to the bluetooth signal of the interface and turn on WIFI.

Test the system with respect to graphics, sound, radio and interface switching, and reverse.

Step 7. Seal the system

Reconnect all parts in reverse order. Place the microphone near the interior rearview mirror. Smooth out the deed in the seams.

Step 8. Have fun!
